## Work Process

Defining work processes can be a great way to learn more about how the person creates value. A work process is any method a person uses to create value for the client.

The work process avoids any waste of time, energy, or finances involved in the project.

### 1. Analysis of Requirement

Before Start, it is essential to gather the requirements in this very first phase

### 2. Design

Design is the next phase. In this stage, the draft design is prepared based on requirement

### 3. Development

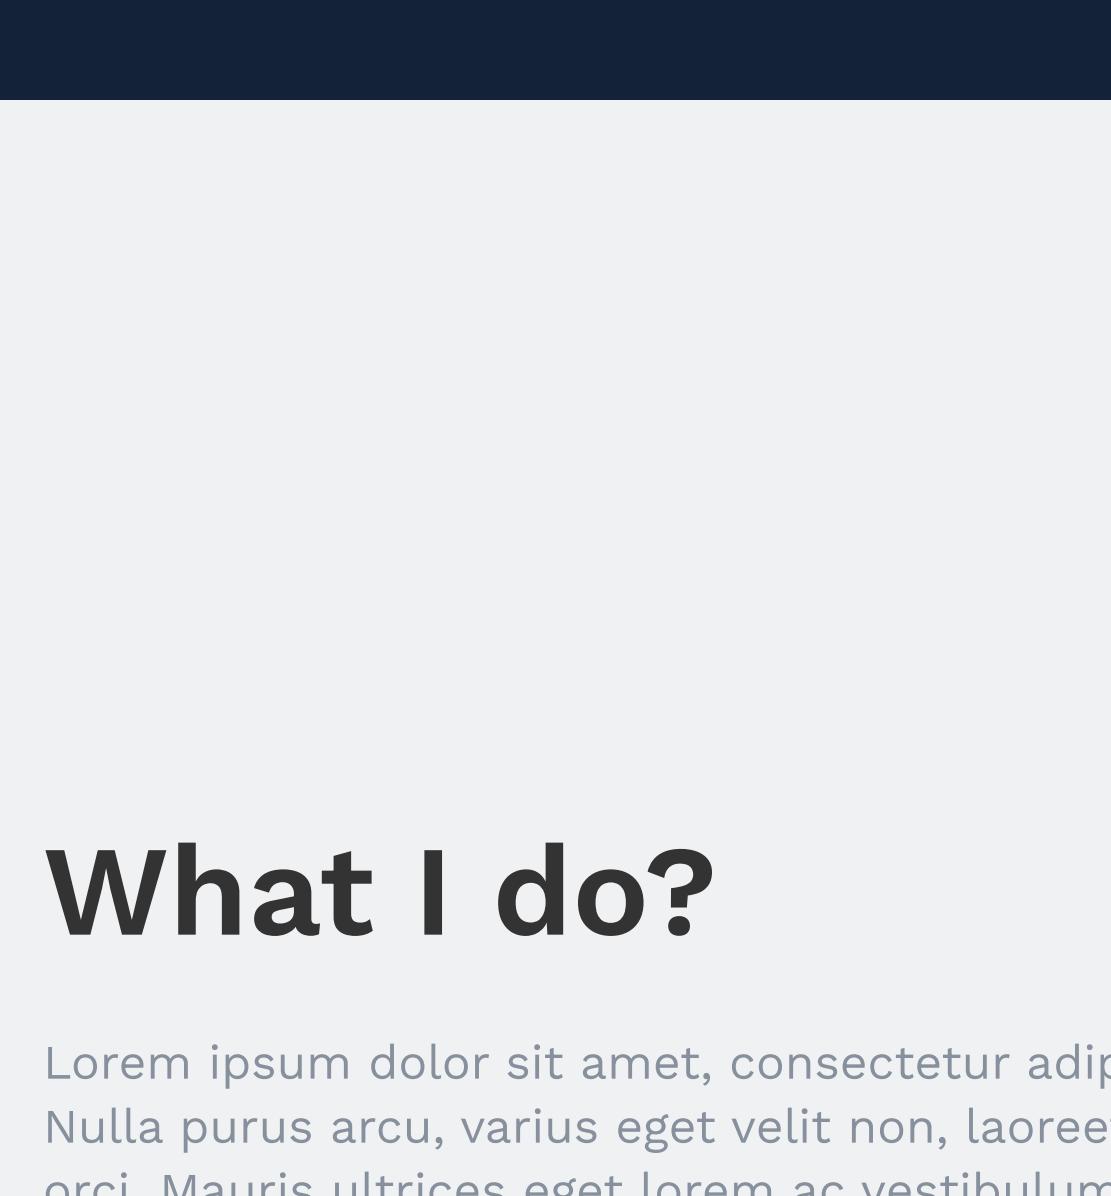

After receiving the design documents. This is the stage where actual coding begins

### 4. Deployment

After converted into code then deployed or delivered to the customers to be used.
